

Rail Tech Group Railway & Signal Engineering Limited (RTG) integrates environmental issues as a part of its management processes. All personnel are required to maintain due care and consideration for the environment and act within a framework of environmental stewardship.

The intention of RTG is to ensure that all its operations and activities are as environmentally friendly as possible. To this end it seeks to comply with relevant regulations and/or codes of practice that contribute effectively to providing an environment that is safe, quiet and clean, both for company employees and the general public who might be affected directly or indirectly by its activities.

Waste reduction and conservation of resources is examined at all levels. Our objective is to achieve a sensible balance between our environmental, business and legal obligations.

It is the policy of RTG to conduct its undertakings in such a manner so as to minimise the effects on the environment.

One of the fundamental objectives is waste minimisation and to achieve this the Company:

Reduces waste at source by planning its activities in such a manner so as to take account of expected waste and its final destination.

Manages waste effectively by recycling or treating waste generated through construction and maintenance operations.

Persuades manufactures and suppliers to reuse or recycle packaging provided for the Company.

Uses material(s) from sustainable sources.

Advises clients on the best available techniques to reduce the effect of construction and maintenance operations on the environment in general.

Advises clients on the best practicable use of waste generated by the proposed project.

Ensures the lineside is left in a safe and tidy condition after all trackside operations.

Mr S E Jamieson
Managing Director
